240+ PRODUCT APPROVALS

# Our History and Our Promise

We are proud of our longstanding history of supporting over 240 product approvals. Since our founding in 1987 we have grown our scale and clinical development acumen to become the innovative, full-service CRO we are today. By aligning our operational excellence, deep therapeutic expertise, and appropriate technology, Synteract continues to be perfectly positioned to advance innovative therapies for patients who need them.

So, WHY SYNTERACT? The answer is because what we do is what we say. That is our promise. It is what our caring and highly skilled people have done, and will do every day. We are passionate about fulfilling this promise for our clients...because patients are waiting.

# Bringing Clinical Trials To Life™

Just as our clients do, all of us at Synteract dedicate ourselves to bringing a better future to patients. Improving the quality of human lives: it is why we are all in this industry.

We listen to and collaborate with each of our clients to strategically adapt our services to support their specific needs. These include:

- Feasibility
- Project Management
- Clinical Operations
- Data Management
- Biostatistics
- Submission Dossier Prep
- Medical Affairs
- Regulatory Affairs
- Safety Services
- Functional Service Provision

# Our Core Centers of Development

We focus on some of the most progressive areas in the biopharma industry in which we have great depth of knowledge and experience, along with other therapeutic areas to which we have been committed for 30+ years. We offer both standalone and full-service programs.

**Oncology:** We have deep knowledge across numerous cancer types and hematological malignancies, with particular expertise in early phase oncology research. We were one of the first CROs, 10+ years ago, to begin working on cutting-edge immunotherapy trials.

**Neuro Degenerative:** Synteract has extensive experience in clinical development programs for drugs that address Alzheimer's, Parkinson's, ALS, multiple sclerosis, migraine, schizophrenia, and

other neuro degenerative, pain, and psychiatric disorders.

**Pediatrics:** Our pediatric cross-functional team is at the forefront of working with sponsors in pediatric drug development, having conducted 245+ pediatric clinical trials globally.

**Rare/Orphan:** We specialize in studies for diseases that affect a small portion of the population, having conducted more than 100 trials in rare and/or orphan diseases, covering a wide range of therapeutic indications.

**Dermatology:** We have conducted 230+ dermatology studies across multiple indications, and have established strong relationships with clients and investigators.
