

synteract®

a SYNEOS HEALTH company

Our History and Our Promise

We're proud of our history of supporting over 240 product approvals since 1987. By aligning our operational excellence, deep therapeutic expertise, and appropriate technology, Synteract continues to be perfectly positioned to advance innovative therapies for patients who need them.

So, WHY SYNTERACT? Because what we do is what we say. That's our #SynteractStrong promise. We're passionate about our **Bringing Clinical Trials to Life™** mission, which represents our commitment to engage with drug developers, patients, investigators, and regulatory experts, to bring insights to action and make better therapies a reality. We're advancing clinical development because patients are waiting.

Bringing Clinical Trials To Life™

Just as our customers do, all of us at Synteract dedicate ourselves to bringing a better future to patients. Improving the quality of human lives: it is why we are all in this industry.

We listen and collaborate with each of our customers to strategically adapt our services to support their specific needs. These include:

- Feasibility
- Project Management
- Clinical Operations
- Data Management
- Biostatistics
- Submission Dossier Prep
- Medical Affairs
- Regulatory Affairs
- Safety Services
- Functional Service Provision
- PKPD Simulation & Modeling

4,000+ CLINICAL TRIALS

750,000+ PATIENTS

62+ COUNTRIES

30+ Years of Notable Experience

Our Core Centers of Development

Dermatology: Our work is on novel and in-demand dermatology drug development across multiple indications. We have established strong relationships with customers and investigators.

General Medicine: We address the needs of customers who continue to seek our support in other therapeutic areas where we have built deep expertise, especially in Endocrine & Metabolic, Gastroenterology, Immunology & Inflammatory, Infectious Disease & Vaccines, and Women's Health.

Oncology: We have deep knowledge across numerous cancer types and hematological malignancies. We were one of the first CROs, 10+ years ago, to begin working on breakthrough immunotherapy trials.

Neuroscience: As neurology, pain and psychiatry studies become more complex, so does the burden of study participation on patients and their caregivers. Our goal is to make it as easy as possible to participate.

Pediatrics: We deliver a single source model for preclinical and clinical development, along with the specialized understanding it takes to conduct studies with children and their families.

Rare/Orphan: We cover a wide range of therapeutic indications, specializing in studies for diseases that affect a small portion of the population that are otherwise “forgotten” by other treatments.
